

Water saving urinals at College of Engineering, Pune

College of Engineering, Pune (Maharashtra)

College of Engineering, Pune (CoEP) is one of the elite engineering colleges in India. CoEP offers 13 different streams for Bachelor of Technology degree and Master of technology degree. As a result of which more than 1000 students enrol every year in this college.

Looking at this situation, the number of sanitation facilities is also large. In this college at the academic campus, most of the Gents' Urinal blocks are fitted with membrane based water saving urinals. As a result of which there is a huge saving in the flushing water needed to flush the urinal pan after use.

After the installation of water saving cartridges to the existing urinal pans, the urinal pan has to be flushed only twice or thrice a day depending upon the use instead of repeated flushing after every use. Hence the requirement of water in the sanitation facilities has drastically reduced. Moreover the sanitation facilities are not stinking and have become easy to maintain.
